

RAMJI SRIDARAN

🏠 Software Engineer (Java | Microservices | AWS | Snowflake | Bigdata | Springboot)

📞 +91 94433 22527 | ✉ ramjisridaran@gmail.com

🌐 LinkedIn: [linkedin.com/in/ramji-sridaran](https://www.linkedin.com/in/ramji-sridaran) | 🌐 Portfolio: ramji-sridaran.github.io

Professional Summary:

- Amassed over 11 years and 10 months of experience in Java-based web applications, Big Data ecosystems, and cloud-native architectures, delivering scalable and high-performance solutions in advertising, financial services, and IoT domains.
- Functioning as a Technical Lead at Dentsu Global Services, driving development of applications and integration initiatives while ensuring top-notch deliverables.
- Demonstrated expertise in AI integration and serverless architecture, implementing intelligent chatbot solutions with multi-provider fallback strategies using OpenAI, Groq, and Hugging Face APIs on Vercel's serverless platform.
- Expertise in cloud platforms (AWS, Snowflake, and client-specific clouds), driving data integration, workflow automation, and large-scale data processing, leveraging cloud solutions for business-critical applications.
- Strong background in IoT implementation and analytics, designing and deploying sensor-driven monitoring solutions, real-time data pipelines, and predictive analytics frameworks that enhance operational efficiency.
- Skilled in designing cloud-native solutions and data integration frameworks that optimize business processes, data flow, operational efficiency at enterprise scale.
- Hands-on experience in delivering data-driven insights, migration of legacy systems, and analytical solutions, enabling enhanced business performance.
- Adept at developing sensor-driven systems, real-time monitoring solutions, and predictive analytics frameworks that improve efficiency & resource management.
- Resourceful in streamlining workflows, improving system reliability, and enhancing performance through continuous process improvement.
- People-oriented leader with skills in building and leading high-performing teams towards the accomplishment of common goals.

Employer Summary:

- **Technical Lead** – Dentsu Global Services – **Jun 2021 – Present**
- **Associate** – Cognizant Technology Solutions – **May 2018 – May 2021**
- **System Engineer** – Tata Consultancy Services – **Feb 2014 – May 2018**

Technical Skills:

- **Programming Languages** : Java, Python (Basic), JavaScript, Shell Scripts, SQL
- **Operating Systems** : Mac, Linux
- **Databases** : MS SQL, PostgreSQL, Snowflake, HBase
- **Database Version Control** : Liquibase
- **Code Version Control** : Git, Bitbucket, GitHub
- **Logging** : Splunk
- **Monitoring** : Dynatrace, Datadog

- **Servers** : Tomcat, WildFly
- **Build Tools** : Maven
- **Frameworks** : Spring Boot, Node.js
- **AI Integration** : OpenAI API, Groq API, Hugging Face Models
- **IoT Queueing** : eMqttD, Mosquitto, PAHO
- **Code Analysis** : SonarQube, Checkstyle, PMD, SpotBugs
- **Tracking** : JIRA
- **Cloud** : AWS Services, Snowflake, Client Native Clouds, Vercel
- **BigData** : Kafka, Hbase, Sqoop, Solr, Spark

Professional Experience:

TATA CONSULTANCY SERVICES

Feb 2014 – May 2018

Role: IoT Developer [Java + Bigdata]

Project Name: Remote Chiller Monitoring System

Client Name: Voltas

Domain: HVAC

Technologies and tools used: Apache, Scala, Apache Kafka, Mosquitto MQTT, Redis, Hbase, PostgreSQL, Java Spring, Rest APIs, Angular JS, HTML, CSS, Apache Tomcat, Git, Maven, AWS

Project Description:

A real-time IoT analytics platform for monitoring chiller performance across distributed locations. The system processes high-frequency sensor data, delivers actionable insights, and enables significant improvements in energy efficiency and operational responsiveness.

Roles & Responsibilities:

- Real-time ingestion of sensor data from MQTT brokers into Kafka and Spark Streaming workflows
- Batch and streaming analytics using Scala-Spark for aggregations, anomaly detection, and performance trends
- RESTful APIs for data acquisition, reporting, and consumption by dashboards and analyst tools
- Customizable UI components for live monitoring and operational dashboards
- Downloadable analytical reports for engineers and data analysts
- Production support including multi-node cluster management and coordination with on-site engineering teams
- Continuous enhancements through requirement analysis, client walkthroughs, and iterative bug fixing

COGNIZANT TECHNOLOGY SOLUTIONS

May 2018 – May 2020

Role: Bigdata Engineer

Project Name: Insights – Dental (Big Data Migration & Search Platform Modernization)

Client Name: Metlife Insurance

Domain: Insurance

Technologies and tools used: Apache Spark, Scala, Sqoop, HBase, Apache Solr, PostgreSQL, RDBMS, Shell Scripting, Java, Eclipse, Maven, Bitbucket, Bamboo

Project Description:

A two-phase modernization program transforming legacy dental insurance systems into a scalable big-data ecosystem, followed by building a high-performance search and analytics platform on Apache Solr and HBase. The solution significantly improved data availability, search speed, and operational efficiency for customer support and analytics teams.

Roles & Responsibilities:

- Migration of large volumes of legacy data into a robust big-data environment using Sqoop, Spark, and Informatica CDC files
- End-to-end development of Spark-Scala pipelines for data transformation, table merging, and loading into HBase and Solr
- Automated data ingestion workflows through shell scripting for QA validation and recurring data refresh requirements
- Solr schema design and optimization enabling fast, accurate policy search for customer support applications
- Performance tuning including HFile-based bulk loading into HBase and optimized Sqoop split configurations
- Requirements analysis, design documentation, and continuous enhancements across multiple release cycles
- Coordination with onsite teams for change requests, solution walkthroughs, and multi-team alignment
- QA collaboration for defect analysis, test support, and quality-oriented release governance
- Production support including troubleshooting, cluster-level issue resolution, and risk/estimation reporting
- Preparation of release plans, cross-application integration reviews, and post-deployment validation

COGNIZANT TECHNOLOGY SOLUTIONS

May 2020 - May 2021

Role: Java-Bigdata Developer

Project Name: MF2C – Financial Services Mainframe to Cloud Migration

Client Name: Walmart

Domain: Retail

Technologies and tools used: Spring Batch, Java, Microservices, Apache Kafka, Liquibase, Azure Cloud, Kubernetes, Maven, Splunk, Dynatrace, SonarQube, Rest APIs

Project Description:

A large-scale modernization initiative to migrate core financial-service workloads from legacy Mainframe systems to Azure and client-owned cloud platforms. The project implemented real-time data channels, Spring Boot microservices, automated testing suites, and cloud-native infrastructure to support day-to-day financial operations with improved reliability, scalability, and data quality.

Roles & Responsibilities:

- Led and mentored a 2-member engineering team, providing technical guidance, task prioritization, and continuous feedback
- Distributed work items, tracked progress, and ensured timely delivery of sprint commitments
- Acted as the primary technical point of contact for the module, coordinating with client manager.
- Designed and implemented Kafka-based data channels integrated with Spring Boot services for generating daily financial data files
- Led requirement analysis and documentation efforts using Confluence, ensuring clear technical alignment across teams
- Designed database schemas and implemented version-controlled migrations using Liquibase
- Developed Spring Boot REST APIs, schedulers, and microservices supporting cloud data workflows
- Built utilities to validate data quality and compare outputs between Mainframe-generated files and cloud-generated equivalents
- Maintained high engineering standards with code coverage consistently above 80% per commit
- Developed automated test suites to ensure stability and correctness of deployed services
- Provisioned and managed cloud clusters across Azure and client-specific cloud environments
- Performed end-to-end data quality testing to ensure functional and regulatory compliance
- Conducted code reviews, walkthroughs, and sprint demos for stakeholders in an Agile delivery model

DENTSU GLOBAL SERVICES

Jun 2021 – Dec 2025 [Present]

Role: Technical Lead

Project Name: Databridge [Merkury]

Client Name: Merkle [Product development]

Domain: Ad-Tech

Technologies and tools used: AWS, Snowflake, Airflow, Liquibase, Jenkins, Kubernetes, Java, Rest APIs, Microservices

Project Description:

A large-scale, cloud-hosted data integration platform used in the advertising domain to ingest client datasets, process audience segments, and publish them to major social media channels. Built on AWS with Snowflake as the data backbone, the system supports continuous delivery through Jenkins and Kubernetes. Led a team of five engineers, driving feature development, platform enhancements, and reliable automation at scale.

Roles & Responsibilities:

- Led a cross-functional team of 6 engineers (4 backend developers and 2 DevOps engineers), providing technical direction, sprint planning, and delivery oversight
- Owned end-to-end feature delivery, from requirement clarification and design reviews to production rollout and post-release validation
- Coordinated closely with DevOps to define deployment strategies, infrastructure readiness, and operational monitoring standards
- Reviewed architecture and code changes to ensure scalability, reliability, and adherence to platform standards
- Acted as the primary escalation point for production issues, driving root-cause analysis and long-term corrective actions
- Facilitated Agile ceremonies, including sprint planning, backlog grooming, and stakeholder demos
- Mentored team members on workflow orchestration, cloud services, and CI/CD best practices, improving overall team effectiveness
- Designed and maintained AWS Simple Workflows to process high-volume client datasets and deliver accurate audience segments to activation platforms
- Integrated multiple social media ecosystems (Facebook, Google Ads, LinkedIn, etc.) and managed periodic SDK upgrades to ensure long-term platform compatibility
- Onboarded new advertisers and publishing destinations, expanding ecosystem reach and customer adoption
- Implemented support for new ingestion data types, improving flexibility and reducing onboarding friction
- Developed REST APIs enabling new features, simplifying cross-platform communication and accelerating rollout cycles
- Led feature and version upgrade strategies, optimizing performance and improving data throughput
- Enhanced file-processing pipelines to handle diverse input formats at scale, resulting in lower processing time and reduced error rates
- Mentored 5 interns on a Spring Boot-based project, providing architectural guidance, conducting code reviews, and offering actionable feedback to improve code quality, design practices, and adherence to specifications

Education:

- **B.Tech. Information Technology** – M Kumarasamy College of Engineering – **84% – 2009 - 2013**
- **HSC** – Jaycees Matriculation Hr. Sec. School – **87% - 2009**
- **SSLC** – Jaycees Matriculation Hr. Sec. School – **84% - 2007**
